SUMMARY

Software Engineer with 10+ years of experience designing, optimizing, and operating large-scale production systems. Known for a detail-oriented approach to debugging, refactoring, and system optimization, with careful attention to edge cases, backward compatibility, and operational impact. Experienced in Linux environments, concurrent data processing, system observability, and cross-functional collaboration with architecture, SRE, and product teams. Passionate about improving application performance, reliability, and long-term maintainability.

SKILLS

- **Programming Languages:** PHP (Advanced), Kotlin (Intermediate), Go (Intermediate), Node.js (Intermediate), Python (Beginner), Java (Beginner)
- **Frameworks:** Laravel, WordPress, Ktor, Express
- **Databases:** MySQL, Redis
- **DevOps:** Docker, Terraform, RabbitMQ, Grafana, Prometheus
- **Version Control:** Git, Git Workflow, Subversion

WORK EXPERIENCE

Software Developer
Nov 2021 - Aug 2025

meteocontrol GmbH | Augsburg, Bavaria, Germany (Remote)

- Integrating various formats of solar PV data logger manufacturer data sources into VCOM Cloud to expand data coverage, enabling seamless onboarding for enterprise customers worldwide.
- Refactored the monolithic system written in PHP into modular internal APIs using Kotlin with OpenAPI, improving consistency across services and strengthening scalability for future growth.
- Operated and optimized a RabbitMQ-based queue system and monitored it using Grafana and Prometheus, which processes 400M+ PV records daily, ensuring fault-tolerant, real-time monitoring for international clients.
- Led a PHPUnit upgrade from v9 to v10 and found replacements for abandoned methods, reducing test execution time from 38 seconds to 18 seconds and improving long-term test maintainability.
- Migrated Flysystem from v2 to v3 and rewrote the file adapter implementations, managing breaking changes while preserving backward compatibility for hundreds of thousands of existing files.
- Captured and documented tribal knowledge across distributed teams, improving cross-team alignment and lowering the risk of information bottlenecks.

Full Stack Engineer
Sep 2021 - Nov 2021

RespShop | Redmond, Washington, United States (Remote)

- Maintained and optimized an e-commerce platform built with osCommerce.

Backend Engineer
Jul 2018 - Dec 2020

Larvata Digital Technology Ltd. | Taipei City, Taiwan

- Built a reward point and promo code system from scratch using Laravel, driving engagement and sales across multiple brands.
- Integrated the Google Sheets API into a backend system used by 23 restaurants to automate purchase reporting.
- Expanded WooCommerce payment options by integrating the Cathay United Bank payment gateway, improving checkout flexibility.
- Mentored junior developers on resolving technical issues in backend development.

Backend Engineer
May 2016 - Dec 2017

PanSci Knowledge Co., Ltd. | Taipei City, Taiwan

- Developed a headless CMS powering 4 WordPress sites, boosting cross-platform publishing efficiency.
- Built RESTful APIs with Slim Framework for an Android app reaching 5K+ monthly downloads.
- Automated editorial workflows with custom WordPress plugins, cutting manual working time by half.

PHP Developer
Mar 2015 - Jan 2016

SMS Taiwan Co., Ltd. | Taipei City, Taiwan

- Extended existing Joomla! APIs to enable internal systems to access a wider range of healthcare data.
- Increased test coverage by writing PHPUnit unit tests for an open-source Joomla! RAD framework.

Software Engineer
Oct 2012 - Jan 2015

PChome eBay Co., Ltd. | Taipei City, Taiwan

- Strengthened web application security with regex-based input validation to fix XSS vulnerabilities and improve user content sanitization.
- Authored internal documentation to improve onboarding and knowledge sharing.

EDUCATION

National Sun Yat-Sen University

Bachelor of Business Administration, Management of Information Systems

LANGUAGES

- **English** (Professional working proficiency)
- **Taiwanese Mandarin** (Native)
